

PRESS RELEASE

For Immediate Release – October 12, 2005

Scanflex International AB acquires Demetech AB

Swedish company Scanflex International AB, a leading provider of state-of-the-art imaging systems for orthopaedic surgery and products for personal radiation protection has completed the acquisition of Demetech AB.

“As a company, we have been focused on expanding our business within equipment for orthopaedic diagnosis and treatment,” says Lars Johan Johnson, Chairman and CEO. “Demetech’s products fit perfectly in our product portfolio and we have every expectation that this acquisition will strengthen our leadership position in a growing market.”

"I'm excited seeing Scanflex as a new owner. The combination of Demetech and Scanflex ensures the company's success and further development," says John Elliott, Director of Sales and Marketing at Demetech.

Demetech will continue to sell their products through their already established distribution partners world-wide.

About Scanflex International AB

Stockholm Sweden based Scanflex International AB is through its subsidiaries Scanflex Medical AB and Swemac AB a leading provider of imaging equipment for orthopaedic surgery and products for personal radiation protection. The products are well known for their innovative design, high quality and ease of use. With manufacturing facilities in Sweden and Switzerland the products are sold world wide through a network of distribution partners.

About Demetech AB

Demetech AB, also based in Stockholm Sweden develops manufactures and markets systems for the diagnosis and early detection of osteoporosis. DXL, Dual Energy X-ray and Laser, is the proprietary patented technology that gives superior reliability through unsurpassed accuracy and precision. DXL Calscan is the first instrument based on this technology.
